

# Poa Trivialis

# Laser

Product

## CHARACTERISTICS

Laser Poa Trivialis is ideal for winter overseeding of Bermudagrass tees and greens. It exhibits fast germination, shade tolerance, cold tolerance and has better spring transition than most varieties on the market today.

Laser has a stoloniferous growth habit for improved density plus it has fine leaf texture with a deep green color for a high quality turf area. Laser's growth habit allows it to recuperate quickly and provides excellent season long putting surface.

## SEEDING RATE

Southeast 12-20 lbs. per 1,000 square feet  
Southwest 7-12 lbs. per 1,000 square feet

## BENEFITS

- Excellent Putting Surface
- Excellent Winter Color
- Quick Fall Establishment
- Shade Tolerance
