

Creeping Bentgrass Blend

Product Sheet

When you want to fortify your bentgrass greens, plant **Redan Creeping Bentgrass Blend!** **Redan** is composed of two premium bentgrass varieties; Independence and LS-44. After years of selection, only the most promising plants exhibiting improved turf quality, excellent disease resistance and superior putting surface were chosen.

Seeding Rates

A seeding rate of 1-1.5 pounds per 1,000 square feet for new turf. For overseeding and inter-seeding, use 2-3 pounds per 1,000 square feet. Germination will occur after 7-10 days under ideal conditions. First mowing should occur within 30 days from time of seeding.

REDAN Characteristics

- ◆ Outstanding turf throughout the year
- ◆ Drought and heat tolerance
- ◆ First rate turf density
- ◆ Can survive in higher levels of sodium
- ◆ Upright aggressive growth habit
- ◆ Quick establishment

REDAN Advantages

- ◆ Dark green color
- ◆ Excellent early spring green up
- ◆ Good winter color
- ◆ Very high brown patch resistance
- ◆ Outstanding resistance to microdochium patch
- ◆ High quality turf at close mowing heights

2003 National Turfgrass Evaluation Program-National Bentgrass (Putting Green) Test
2005 Data
1-9 with 9 being the best

Variety	Turf Quality	Spring Greenup	Genetic Color	Dollar Spot	Leaf Texture	Fall Density
