

Fine  
Fescue

# SCOTTISH CREST™

Product Sheet

**SCOTTISH CREST Fine Fescue Mixture** is a mixture of improved varieties of Fine Fescue; Chewings, Hard, Creeping Red and Sheep Fescue. These resourceful species can be used for low maintenance lawns in many different environments. Other applications include wild-life cover, roadsides, wildflower areas, golf course fairways, tees, roughs, and low maintenance slopes for soil erosion.

## Management Tips

Performs well in sun or shade. 2-4 pounds of N during a growing season is sufficient to produce a healthy turf. First mowing may begin 2-3 weeks after emergence. Best adapted from the transition zone northward, Northwest and Northeast.

## Seeding Rates

4-6 pounds per square feet or 200-250 pounds per acre. Germination will occur in 5-10 days after seeding under ideal conditions.

## Characteristics

- ⇒ Shade tolerant
- ⇒ Drought tolerant
- ⇒ Disease resistant
- ⇒ Good for low maintenance
- ⇒ Low growing
- ⇒ Fine textured

## SCOTTISH CREST Advantages

- ⇒ Low maintenance turf
- ⇒ Reduced mowing
- ⇒ Improved disease resistance
- ⇒ Excellent cold weather tolerance
- ⇒ Dark green color
- ⇒ Low height of cut
- ⇒ Improved wear tolerance compared to other fine fescues

The components of **SCOTTISH CREST Fine Fescue Mixture** are listed below.

**40% Chewings Fescue-Jamestown IV.** Lush dark green color that proves a uniform turf. Excellent resistance to snow mold, dollar spot and red thread.

**40% Hard Fescue-Rhino.** Dwarf, low growing deep green color with an aggressive crown. Flourish in low fertility and infrequent irrigation.

**10% Sheep Fescue-Barok.** Unique dehydration avoidance mechanism that exhibits drought and arid climate heat tolerance.

**10% Creeping Red Fescue-Crossbow.** Improved turf quality with excellent density due to its aggressive rhizomes. Resistant to powdery mildew and red thread.
