

Forage Tall Fescue

Bull

Product Sheet

CHARACTERISTICS

BULL is the highest quality of Oregon grown grass seed with excellent purity, freedom of weeds and other grasses, high bushel weight and low endophyte. It does not contain the natural endophyte, which is a serious problem with some older varieties.

A strong plus for **BULL** is that it is an early maturing variety, being a week earlier in maturity than Ky-31, Johnstone and Stargazer. This aspect is important to the cattle producer who may have large acreages of dormant Bermudagrass.

BULL was bred from a wide genetic base to help provide a wide geographical area of adaptation and use.

BULL has demonstrated high forage yields in the Southeastern USA at Kentucky and Mississippi State. It is reliable producer of high quality forage under a wide range of soil and drainage conditions.

BULL can be relied upon to provide high yields of first cutting and subsequent harvests. It is a variety worth evaluation by Leading livestock producers in the Southern and Midwestern USA.

TRIAL DATA

Variety	1999 Yield	1998 Yield	1998-99 Average	1st Cutting	Stand 10/7/99
Bull	5.69	4.78	5.23	5/19	92.50
Stag	5.95	4.96	5.46	5/19	92.00
Ky-31	5.75	4.31	5.03	5/19	90.50
Barcel	5.12	4.10	4.61	5/25	88.60
Tuscany	4.90	4.65	4.77	5/25	89.20
Grand Mean	4.17	4.51	4.34		91.40
CV,%	6.91	6.45	4.86		2.80
LSD, 0.05	0.47	0.48	0.34		4.10

* Seeded August 1, 1997
* Yields (tons per acre dry-matter basis)
* Yields indicated represent the sum of four cuttings each year in 1998 and 1999
* Grand Mean, CV, and LSD values represent 56 total entries
* Stand score based on a scale from 1 to 100. A 100 is considered to be a perfect stand
* 1st cutting was made at late boot to early heading at 1st cutting in 1999

SEEDING RATE

New Seeding: 20-25 lbs. per acre
Inter-seeding: 15-20 lbs. per acre
Over Seeding: 40-50 lbs. per acre

BENEFITS

- Endophyte Free
- Early Maturing
- High Forage Yields
