

Kentucky Bluegrass

Alley Cat

Product Sheet

CHARACTERISTICS

Alley Cat originated from the cross of a maternal plant derived from “Wildwood” Kentucky bluegrass and paternal lineage of “Baron” Kentucky bluegrass. After evaluation for turf quality, disease resistance and seed production, Alley Cat was released commercially in the fall of 2005.

Alley Cat is medium dark green variety that exhibits many characteristics of “Baron” Kentucky Bluegrass. Unlike “Baron”, Alley Cat has a better disease resistance package. Alley Cat shows significantly better resistance to Stripe Smut and Powdery Mildew than Baron or Baron types.

Alley Cat has exhibited excellent seed vigor and establishment in both production and turf applications. Good spring green up and slow vertical growth habit make Alley Cat a good addition to your perennial ryegrass and fine fescue blends for homeowners.

SEEDING RATES

3-4 LBS/1,000 square feet for new establishment
1-2 LBS/1,000 square feet for overseeding

BENEFITS

- Excellent Seedling Vigor
- Excellent Establishment
- Good Spring Green Up
- Medium Dark Green Color
