

SITKA TURF TYPE TALL FESCUE has been selected for overall improved turf quality and superior disease resistance. An enduring tall fescue that is a low growing, deep rooted variety. **SITKA** is an ideal selection for homeowners, sod producers, lawn care professionals and other turfgrass professionals. Sitka is adaptive to the traditional tall fescue regions of the United States; West Coast, Rocky Mountain region, Transition zone, Southeast and the East coast.

Seeding Rates

A seeding rate of 350-450 pounds per acre or 8-10 pounds per 1000 square feet. Half of those rates for overseeding. A seeding depth of 1/8"-1/4" is best for establishment. Germination will occur after 7-10 days under ideal conditions. First mowing should occur within 30 days from time of seeding.

SITKA Characteristics

- ⇒ Outstanding turf throughout the year
- ⇒ Drought and heat tolerance
- ⇒ High levels of Endophyte
- ⇒ Can survive in higher levels of sodium
- ⇒ Blends well with Kentucky Bluegrass to provide a superior turf

SITKA Advantages

- ⇒ Dark green color
- ⇒ Superior performance in full sun and partial shade
- ⇒ Fine leaf texture
- ⇒ Good brown patch resistance
- ⇒ Good early spring green up
- ⇒ Good turf density
